A **Product Engineer** with **2.5+ years** Skilled in **Java, SpringBoot, Database, Angular and React** building robust web applications and optimizing backend performance.

EXPERIENCE

Speridian Technologies, Product Engineer | Hybrid (Bengaluru, KA, India)

Apr 2025 – Present

- Promoted to Product Engineer for consistently delivering high-impact features and end-to-end ownership of full-stack modules.
- Developed and deployed new UI features in Angular, enhancing UX and improving user engagement across the platform.
- Maintained and extended the Commission Module in React, implementing feature upgrades and UI/UX improvements.
- Collaborated closely with cross-functional teams to implement product-driven solutions, ensuring smooth agile deliveries.
- Worked on backend enhancements in Java Spring Boot, contributing to API development, bug fixes, and integration with microservices.
- Participated in sprint planning, product reviews, and production deployments, ensuring quality and timely releases.
- Contributed to UI testing, data consistency checks, and API validation to maintain system stability.

Speridian Technologies Software Engineer | Hybrid (Bengaluru, KA, India)

Nov 2022 – Mar 2025

- Spearheaded the development of high-performance backend systems using Java Spring Boot, improving system scalability by 40% and reliability, handling 200,000 daily transactions in healthcare and financial sectors.
- Designed and implemented a Reconciliation Matching Platform, automating data matching across sources (Sales, Carrier, Commission), reducing manual reconciliation efforts by 70% and increasing data accuracy by 25%.
- Led the creation of a BPO Dashboard, integrating Excel import/export features, Angular Material, and MySQL, which enhanced operational efficiency for 3+ BPO centers by 50%.
- Enhanced user experience by developing dynamic interfaces with React and Angular, boosting platform engagement rates by 30%.
- Developed and integrated 15+ REST APIs, ensuring secure and efficient data exchange between microservices, reducing system downtime by 20%.

EDUCATION

AISSMS College of Engineering, Pune, B. Eng in Production Engineering | Pune, Maharashtra, India

May 2020

PROJECTS

Java-NLP – Natural Language Processing Toolkit

Jan 2024 – Feb 2024

- Developed a Java-based NLP engine using Stanford NLP for tokenization, lemmatization, POS tagging, named entity recognition, and sentiment analysis.
- Designed a modular structure for easy integration into enterprise Java applications.

Sign-Up/Login API – Spring Boot with JWT Authentication

Dec 2023 – Jan 2024

- Built a secure REST API for user sign-up and login, implementing JWT authentication and role-based access control.
- Integrated password hashing, input validation, and refresh token mechanisms to enhance security.

Netflix Clone – Angular + IMDb API Integration

Oct 2023 – Nov 2023

- Created a responsive Netflix-like frontend using Angular 16, consuming IMDb API to display real-time movie data.
- Implemented Google Authentication for secure login and Firebase for hosting.

Spotify Clone – Angular Music Player UI

Sep 2023 – Oct 2023

- Developed a Spotify-inspired UI using Angular, featuring dynamic song cards and authentication flows.
- Focused on UI/UX responsiveness and component reusability.

NER Spring Boot – Named Entity Recognition API

Aug 2023 – Sep 2023

- Implemented a Spring Boot microservice for Named Entity Recognition using Stanford NLP.
- Exposed REST endpoints to extract named entities from input text and return structured results.

Speech Recognition – Audio Transcription in Python

Jul 2023 – Aug 2023

- Built a Python script using the SpeechRecognition library to transcribe audio files using Google Web Speech API.
- Processed WAV files and displayed transcripts with basic sentiment analysis.

Ollama SpringBoot – GenAI API Scaffold

Jun 2023 – Jul 2023

- Developed a Spring Boot application to expose a REST endpoint (/api/query) for receiving and responding to natural language questions.
- Designed the architecture to easily integrate with future LLMs and GenAI pipelines.

SKILLS

Languages: Java, React, Angular HTML, CSS

Frame Works: Spring MVC, Spring Boot, Microservices, Agile

Databases : Oracle, PostgreSQL, Maria, MySQL

ORM : Hibernate, JPA.

Tools/IDE : IntelliJ IDEA, Eclipse, Redmine, Git
